

# Speed up your iOS Development following the Modules Paradigm

Hosted By  
Adrian T.

## Details

**Intro**  
Speed up your iOS Development following the Modules Paradigm. In this talk, you will learn how the most app used in the world can be built using this paradigm easily, so, if they could use it, why not yours?

The session will include:

- 1. Defining the concept of module.
- 2. Understand the module's life cycle.
- 3. Demystifying complex UIView.
- 4. Setting clear responsibilities.
- 5. Coding time!

**Speaker:** Francisco Javier Trujillo Mata  
Francisco Javier Trujillo Mata, or Trujy how everyone knows him, is an iOS Dev with more than 9 years of experience in the mobile world. He has been working in several businesses passing from consultancy to traveling, gambling and then finally in a fin-tech where he is currently working at Sync.Money

Being a lover of the apps properly designed, he always had in his mind how to make the development easier and more enjoyable either being alone or in a huge development group, that was the origin of the Modules's Paradigm.

As a good open-source collaborator, he has more than 100 repositories in his GitHub profile where he touches a lot of areas (not just mobile development), recently he is spending a lot of time playing around the homebrew for Sony's Consoles.

In his free-no-development-time, he really likes to play football and does snowboarding (when it is possible), traveling (as everyone) and if the day has more than 24 hours play some video games xD

**Book give-away**  
In this session we will be giving a book away to one lucky attendee. It's "App Store Optimization: A step-by-step guide to boosting your app's organic downloads" by Oliver Hoss.

For the not-so-lucky ones, an exclusive discount code will be revealed, exclusively for attendees.

**Agenda**  
18:30 Welcome  
19:00 Talk: "How to compose your apps in small modules and reuse them everywhere"  
19:45 Book give-away: "App Store Optimization"  
20:00 Networking  
20:30 Farewell

## Comments

**Francisco Javier Trujillo M.**

...

Hello guys,  
First of all, thank you very much for attending this talk.  
I have updated the modules-examples repo with the latest slides that we used yesterday.

Also regarding one of the questions was, how fast the snapshots testing are executed?  
The repo contains integrated the CI using TravisCI, so for instance, in our case, we can see the result here:

<https://travis-ci.org/fjtrujy/module-examples/builds/624538454>

Every single snapshot is executed in the worst scenario in 0.1 seconds, but they are running in parallel (up to you CPU threads), so generally, we can say that we can test about 40 - 100 snapshots per second.
