

Workshop: Contract testing for Android and iOS with stubbing HTTP

Hosted By
Adrian T.

Details

It's time to face new challenges, time to improve our automated testing skills beyond simple unit tests. During this 2 hours workshop, we will practice how to add integration tests ensuring the contract signed between our apps and the API we consume is correct.

We will practice a testing strategy named Stubbing HTTP for Android and iOS ensuring we are using the API properly.

This what we are going to use for this fully practical workshop:

- Android:

Kotlin or Java.
MockWebServer.
JUnit.

- iOS:

Swift
XCTest
Nimble
OHHTTPStubs

You only need to bring your laptop ready to code! Will you join us?

Agenda:

18:30 Welcome and setup
19:00 Workshop
21:00 Farewell

Bio:

Pedro Gómez is a software engineer focused on new technologies, open source, clean code, and testing. Right now he's working as a Senior Software Engineer at Karumi, a little software development studio. Tuenti and Droidsers alumni, Pedro tries to write the best possible code every day to build excellent tech products.

Hosts

Special thanks to our hosts for the workshop: BeWorking! coworking space.

...

I know there's some time scheduled specifically for the setup process. In my experience, that always, always, takes longer than expected :). Starting from the connection at the venue not being as anticipated. Also, there might be people that arrive a bit late.

If the setup instructions could be posted beforehand it'd be great!

You are absolutely right Juanjo. We are going to use an iOS or Android repository for this project. Ideally, all the attendees should get an up to date AndroidStudio/XCode and also for the iOS exercise CocoaPods installed. We will use these repositories for the exercises:

https://github.com/Karumi/KataTODOApiClientIOS
https://github.com/Karumi/KataTodoApiClientKotlin

So feel free to fork/clone them and get the build passing before the workshop starts!

...

Hi there! Remember this Thursday we have to bring your laptop ready with Android Studio and XCode up to date! You don't need to install both IDEs, just one of them. If you are an Android developer we will use Java/Kotlin if you are an iOS developer we will use Swift.

Please, if for some reason you can't attend this event remember to update your tell us, and update left your place for another dev.

Cheers!!
